DETAILED ACTION

This is the second action relating to serial application number 09/772,137. Claims 1-35 are currently pending.

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

2. The draftsman has approved the drawing filed with this application as formal drawing.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumoto ('349, applicant's prior art) in view of JP('833, applicant's prior art).

Matsumoto discloses a power transmission belt having a body (1), a length and exposed lateral side surfaces, the lateral surface of the belt is altered by a backing layer (4) attached thereto, and a marking (3) inscribed directly on the backing layer.

Matsumoto also discloses that the marking (3) can be directly provided on the lateral side surface of the belt (col. 4, lines 6-16). Matsumoto does not disclose the side surface of the belt is altered. JP('833 discloses a method of produce a marking on the

surface of a belt altering the surface with a laser beam with an angle of deflection and a scanning mirror (24) in order to prevent inadvertent displacement, removal or wearing of the marking during operation. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to modify the lateral surface of the belt of Matsumoto so the side surface altered by providing a making with a laser beam with an angle of deflection and a scanning mirror in view of JP('833) in order to prevent inadvertent displacement, removal or wearing of the marking during operation.

5. Claims 3- 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsumoto in view JP('833) of as applied to claim 1 above, and further in view of Andrews et al.('994). Matsumoto and JP('833) disclose the claimed invention as in paragraph 4 above, but do not disclose the depth of the inscribed mark on the belt surface. Andrews et al. disclose an inscribed mark having a depth of 0.003 to 0.006 inches (which is within the range of 0.1mm-1mm) in order to prevent the marking from wearing out easily. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to make the depth of the inscribed mark of JP('833) to be within the specified range disclosed by Andrews et al. in order to prevent the marking from wearing out easily over a period of time.

In claim 6, note the belt of Matsumoto is a double V-ribbed belt (fig. 3).

Claims 7-20, the method steps are inherently included in Matsumoto in view of JP('833) device

Response to Arguments

6. Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.
